ASH URNS
IN BIODEGRADABLE GLASS
& CRYSTAL

ANDANTE
Design Annette Krahnert

A person wearing a plaid shirt and dark pants is working in a glass-making environment. They are holding a long, dark rod that extends into a glowing furnace on the right. The scene is dimly lit with a strong blue light on the left and a warm orange glow from the furnace on the right. The person's face is partially obscured by their hand as they work.

ASH URNS IN DECOMPOSABLE GLASS & CRYSTAL

The patented urns are made of a decomposable glass that dissolves within 15 years.

The decomposable glass is developed in cooperation with the Swedish Institute of Glass Research.

The urns are mouthblown in Sweden and is also available in crystal.

The urns comply with SBT's (swedish norms) requirements and are recommended for use as category A (decomposable urns, decomposing within 15 years) or category B (durable urns, in this case crystal).
